

Are state and local regulators overly aggressive at enforcing land disturbance permits established to protect their watersheds? If you're a land developer paying for the design, installation and maintenance of erosion, sedimentation and pollution control plans (ES&PC Plans) and the fines that accompany improper compliance efforts, you might say "Yes"; but if you're a resident living in a nice house on the lake that fills with sediment every time it rains, you would probably say "NO".

PERMIT COMPLIANCE

Don't forget the two types of violations we're trying to avoid in the construction business....permit violations and water quality violations. Focusing on permit compliance will save your lunch when water quality is violated. How much should a land developer or builder invest into the proper design, installation and maintenance of erosion plans? How much enforcement should a developer get when he doesn't install and maintain stormwater devices on his erosion plan?

LESSONS LEARNED

The Georgia Erosion and Sedimentation Act (GESA of 1975) and the Clean Water Act and respective NPDES Permits were created because there was imbalance and people were not happy with their land and water resource condition. For many years society grew in their dissatisfaction about mud in the streets and polluted rivers and lakes. But today, the effectiveness of these laws have caused many to forget what it was like back then before we had

regulations.

As a stormwater consultant and training provider, educating and training thousands of people from all over the country, I find that it most often takes damage to a person's health or property (i.e. quality of life) for them care about water quality. States, counties, and cities must have clean water and reservoirs full of water (not mud) to provide a quality of life worth living for their residents. We need it today, our kids & grandkids need it tomorrow, our animals need it, and our fish require it.

SHORT VIDEO

THE BASICs of a STORMWATER TREATMENT SYSTEM

America has developed an ingenious method of keeping sediment and other pollutants out of our watersheds.

Watch this short 10-minute video that will give you a very basic understanding how a stormwater treatment system designed for a construction site should operate.

CLICK HERE to watch (immediately following the white board talk Dr. Jim Spotts will feature (for 2 minutes) good and bad BMP installations.

Effective "How To's" for Sediment Basins, Baffles and Skimmers This course is designed to educate through <u>classroom and practical field application</u> the design, installation and maintenance considerations for your water treatment devices.

Dr. James Spotts is recognized internationally as a leading expert in the design, installation and maintenance of erosion and sediment control devices. This course is designed to teach you the latest techniques and considerations for truly effective sediment basin operations.

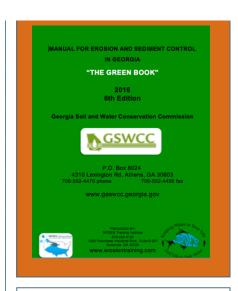

Answers to questions covered in the class will include:

- 1) What types of Surface skimming (Sk) devices can I legally install?
- 2) How do I connect the skimmer to the outlet of a temporary basin?
- 3) What kind of baffle designs will work best in various situations?
- 4) Are there resources available to design and construct one myself so I can save money?
- 5) Can I use the 5th Edition Greenbook instead of the 6th Edition and not worry about installing a surface skimmer device?

CLEAN WATER ACT VIOLATIONS

PRISON and FINES

Tennessee Grease
Hauling Company and
Executives Sentenced
for CWA Violations -On February 19, 2016,
SOUTHERN GREASE
COMPANY was
sentenced in federal
district court for the
Middle District of
Tennessee to pay a
criminal fine of
\$280,000 and to forfeit
an additional \$113,500.

Southern Grease Pump Station

Southern Grease pleaded guilty in May 2015 to four felony violations arising from its illegal disposal of waste grease into municipal sewer systems. Southern Grease, which contracted with restaurants and other customers in Tennessee and Kentucky to collect and dispose of the customers' waste grease, illegally discharged waste grease into grease interceptors that were connected to the municipal sewer systems. This illegal dumping of grease caused substantial damage to municipal sewer systems by clogging pipes and interrupting the operation of pump stations.

BUFFER VARIANCE REQUIREMENTS FOR DAMS

SEATTLE AREA SALMON ARE LOADED WITH ANTI-DEPRESSANTS & OTHER DRUGS FROM HUMAN SEWAGE

(What about fish in the Chattahoochee River? BY ELAISHA STOKES

The everyday chemicals that humans ingest to relieve pain, fight depression and diabetes, or treat infection are winding up in the tissue of fish in Washington's Puget Sound.

A study in the journal Environmental Pollution detected unusually high levels of drugs like Advil, Benadryl, Prozac, and even birth control pills, in the tissue of salmon.

The culprit, according to the study, is human waste.

"About 45 of the 150 chemicals we examined were found in the fish," said James Meador, the lead author of the study and an aquatic toxicologist working with the National Oceanic and Atmospheric Administration. "Some of them were at high concentrations. That's the kind of information that raises eyebrows."

WATER ENVIRONMENT FEDERATION - WATERS WORTH IT!

HERE'S TO TIGHT LINES & GOOD TIMES in Clean Abundant Water!!!

Please remember our military men and women serving the USA who always need our support!

Respecting our neighbors downstream is what NPDES is all about. <u>It's OUR CHILDREN that will</u> <u>be living through decisions we make</u>

today.

NPDES is an investment into our nations future generations so they can also have an equally great place to live, swim, fish, boat, and hunt tomorrow!

A lot is happening today with water regulations that affect a diverse community of public and private entities. If you have areas of interest that you would like included in this newsletter, please contact me at 678-469-5120.

As of February 2016, the NPDES Training Institute will present video's imbedded in various articles of this newsletter. The purpose of implementing video is to introduce concepts and considerations in a different media for purposes related to increasing awareness and education in the water management community. The intent is not to demonstrate the "only" way but only offer considerations and possible alternative solutions to the challenges faced by design, installation and maintenance personnel with regard to managing stormwater and other environmental concerns in urban and rural watersheds. Demonstrating ones "intent to comply" with the NPDES Permit and other federal, state

and local requirements will protect our watersheds, as well as our pocket books in the future.
